QUESTIONNAIRES TO BE OUT DEC. 15

All Registrants Not Yet Accepted Will Have To Sign Them.

Beginning on December 15, the local exemption board will mall out government questionnaries to men subject to selective military service.

Questionnaries will have to be mailed out from the local office at the rate of 125 a day. Mailing will begin on December 15, and on each succeeding day thereafter, for 20 days inthe list will be mailed, or 5 per cent. The mailing of questionnaries will accordingly occupy 20 days' time.

Men already in the service will not receive questionnaries. They will be sent only to those registrants for the draft who have not yet been inducted into military service, whether they have heretofore been examined, and rejected, or exempted.

The tomato and vegetable canning Martin Taken to Penitentiary. factory which will be erected here by the Paducah Vinegar Works, according to an announcement made yesterwill be one of the largest and most modern cannerles in the state. The new cannery will employ about 200 people. The local company will expend \$20,000 for machinery aione, in cans of tomatoes in 10 hours.

CENTENARIAN

POPULAR CHIEFS UNITED Mrs. Ira F. Ellis, One of the City's Oldest Women, Buried Saturday.

Mrs Eunice Elizabeth Ellis, widow of the late Ira F. Ellis, whose funeral Friday night. The city was swept by occurred Saturday, was one of the a biting, stinging wind from the south very oldest persons in Hopkinsville. She was born in Charleston, West highest. More snow fell. Virginia, Mirch 15, 1824, and was not much short of 94 years of age. She was married to Mr. Ellis Oct. 9, 1850, and they lived happily together until sack region against the people and the st their home on Campbell street, until a few years ago, when they moved to their late home on Fourteenth and Coleman streets. They left no children of their own; but many years the snow is now frozen to the ground. ago they adopted an orphan girl who took their name and was known as Madge Ellis. She became the wife of No details of the uprising are as yet the late Edward F. Morris and survives her foster parents. Other rela-

> Mrs. Ellis was a lifelong member of the most devoted Christians. Until prevented by her great age, she was one of the most active and working members of her ehureh in all worthy and charitable movements.

> Funeral services were held at the esidence Saturday morning and the remains of the saintly and venerable woman were laid beside those of her husband in Riverside Cemetery.

SNOW STORM

Terrible Weather Conditiozs During the Bringing of Body to Town.

The burial of Mr. Robert H. Kelly, who died near Pembroke Friday. took place Saturday under the most trying weather conditions. Mr. Kelly died at the home of his nephew, Frank C. Kelly, with whom he had long made his home, about ten miles from town. He was 73 years of age, having been born in this county July 18, 1844. He was unmarried and a byterian church, near his home. He is survived by his brothers, Albert Kelly, of New Orleans, and J. 11. Kelly, of Bayne, La., and three sisters, Mrs. J. A. Gunn, Mrs. Hattie McKee and Miss Francis Kelly, of this city.

Bailey Waller, of the Waller & Trice Co., went to the Kelly home to bring the body to this city for interment. The return trip with the heavy casket proved so difficult that the horses If people seem unkind, read the hitched to the hearse gave out near the residence of Mr. Rhea and sever- If you're all out of sorts, read the al autos in the funeral procession became disabled in the snow, which was more than a foot deep. Mr. Waller left his driver on the seat and waded through the deep snow to Mr. Rhea's, If you are hungry, read the sixth but he was not at home and there were no mules at hand to be secured. After making ineffectual attempts over the phone to hire some mules n the neighborhood, he called Mr. J. The deepest snow in this latitude within the memory of "the oldest inhabitant" was Feb. 2, 1886, 26 inches, The last "blg snow" was Feb 17. 1910 when it was about 11 inches. This one is 2 inches deeper and is the greatest single snowfall in 30 years.

COLDEST IN SIXTEEN YEARS

ATTENTION TO HOGS IN FALL

Animais Are Not as Resistant to Disease as in Spring-Water Supply is of importance.

(By E. R. SPENCE.)
Hogs are not as resistant to disease In the fall as they are in the spring when getting an abundance of green forage, and having access to a wide range. It is necessary, therefore, to give them more attention and better care to offset seasonal conditions and dunger from new eorn.

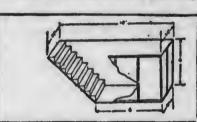

Do not feed in the same lot, or on the same nere of ground, day after day. This contaminates the feeding plnees, and also nttracts crows, pigeons, and sparrows which may have been feeding with a cholera infected herd. Throw the feed out in a different spot each day, thus giving the pigs a clean "plate" from which to

The water supply is of much importance to the health of the hogs at this time of year. Old mud wallows are never good, but are not so bad if the hogs can have pure water to drink, but if forced to bathe and drink in the same "tub" serious trouble can he expected at any time. See that they have an abundance of pure water to drink, situated near the wallow holes or feeding places. Pure water will aid materially in keeping the herd cholera free.

USEFUL DIP VAT FOR SHEEP

Device Shown in Illustration is Convenient Piece of Equipment for Any Farmer.

A dipping vat similar to the one lliustrated ts a convenient pleee of equipment for any farmer to have. since it ean be used for swine and other stock. It should be at least 8 feet long, 22 lnehes wide and 4 feet deep. It may be made of concrete, wood or galvanized fron. The vat should be placed on a hole 2 feet deep,

Handy Dipping Vat.

so that the operators may handle the sheep conveniently. At the time of dipping it is desirable to have a chute of permanent or temporary constructton. This provides a means of placing the sheep in the vat one at n time. At the outgoing end the vat has an angle of 45 degrees provided with eleats, or notehes, which give the sheep n foothold when lenving the A sloping platform, also provided with eleats, should be constructed at the end, from which the sheep lenve the vut; this nilows the solution to drain off the aal lais and return to

MAKING PROFIT FROM SWINE

Proper Care and Feed Are Necessary -Provide Comfortable Quarters and Lots of Sunshine.

In order to make a profit from pigs It is necessary to give them the proper eare and feed. They should be provided with elean, comfortable quarters, I war. exercise, and plenty of sunshine. The sow should be given special care at furrowing time. She should be fed lightly for a few days after farrowlag, and the amount of feed gradually increased as the young pigs de-

The ration for the sow at this time should be one which will produce a henvy flow of milk. A good ration for this purpose is one composed of corn, shorts, bran, a small amount of tankage, and a good quality of alfaifa fed from a rack. Bran may make up 10 per cent of the ration, as It has a beneficial effect on the digestive system and tends to increase the milk pro-

PROPER PASTURE FOR SHEEP

Attention Must Be Given to Parasites That Prey on Woolly Creatures-Move After Two Seasons.

Where sheep are kept as one of the major businesses of the farm, particular attention must be paid to the pasture upon which they graze, since there seem to be a number of internal and external parasites that prey upon the woolly creatures. After sheep have pastured upon one piece of land two seasons it is high time that they were moved to the next pasture.

TROUBLE WITH LITTLE PIGS

Watch Closely for Sore Mouths-Sometimes Advisable to Clip Tuske-Use Disinfectant.

The little pigs should be watched large litters. It is sometimes adviswash the part frequently with a dis-Infectant.

Stopped German Drive Toward Venice

The skillful recreat of the Italian armies under the Duke of Aosta, commander of the third division, from the Carso, where it was already hammering at the doors of Trieste, was a maneuver of great strategic importance. The Italians, after their defeat, returned to the fight, and in a counter attack drove the Anstro-German forces back across the lower Piave, making this sector impassable to the enemy and saving Venice from immediate danger. The battle is now "nip-and-tuck" with the opposing armies, but the Italians, inspired by this victory, have gained confidence and are now fighting with renewed energy. The Duke of Aosta is shown here with his staff officers just before the recent and the Piave.

UNCLE SAM AS TRUCK USER

Government Introduces Standardization Which is Expected to Be of Big Value to Industry.

The fact that Uncle Sam has standardized his trucks, so that any part broken in action may be replaced by a similar part taken from may do so through this bank. another truck, does not necessarily mean that the most efficient delivery system can be obtained only by the uso of a fleet of trucks identical in our hands not later than model and design, says H. W. Slauson, in Leslie's. It does mean, however, that there must be at least a tors will be sent with the certain standardization of methods and a certain interchangeability of parts which will enable each truck to spend its actual time in the most less do the same. effective service.

What the truck industry has needed most has been a standardized system of truck installation, operation and cost keeping. Without such a system it is impossible to determine whether a truck or a fleet of trucks is operating at its maximum efficiency or whether an improvement of some 50 or even 100 per cent in effectiveness could be made by a change here or an elimination of waste effort there. Now, however, it seems probable that this deficiency is to be changed, and that Uncle Sam, as the world's greatest truck user, will evolve a truck system which will prove of intestimable benefit to every user of trucks before, and during, as well as after the

INVENTS NEW MACHINE GUN

Mechanically Operated Loading Device Keeps Beit Filled, Despite Continuous Use.

There comes now an inventor with the significant name of Ford-not Henry, however-with some startling improvements for the machine gun, asserts Edward C. Crossman in the Popular Science Monthly.

The first one is a mechanically operated loading machine to keep tho belt of the gun filled all the time regardless of fire and the duration thereof. The belt loader is operated by the power of the machine on which the gun is mounted, this to be motorcycle, motor tricycle, automobile, airplane or other power vehicle.

The second is a circulating water cooling system, a la automobile, in which the water passes from the jacket around the gun barrel to a regular automobile radiator, which in turn is cooled by a fan driven by the power that operates the loading 60c a box.—Advertisement. meehanism and which in turn is merely the power plant of the car. A centrifugal pump makes the water move, although it would surely thermosiphon hurriedly if this system were used instead of the pump.

The third startler is the fact that the gun is designed to be an integral closely for sore mouths, especially in part of its carriage, which is a gas engine propelled vehicle. Perhaps able to clip the tusks from the pigs, this idea was borrowed from the fighting airplane, in which the machine gun is rigidly mounted to fire through the propeller.

One of Her Irons in the Fire

By ETHEL HOLMES

Copyright, 1917, Western Newspaper Union.) I have always believed in marriage, domestic life, children, and nil that. There is nothing of the strong woman about me. I naturally cling to some thing stronger than myself; i am one of those stupid creatures whom men usually prefer to women more like themselves. Why they do so I am unable to understand.

I was very fond of Charile Owens, but Chnrlie was not much to cling to, and though he loved nie I was unwilling to marry him because I fenred that poverty would fly in at the door and at the same time love would fly out at the window.

If I was stupid I had sense enough to turn Chnrile down. But there my sense ended. I was bound to flad someone to cling to, and siace I knew no man who wanted me or I wanted, I resorted to an advertisement. Not that I condemn advertising, for I don't know unything about it, but ndvertising for a husband or a wife is not usually resorted to by persons of good

I received two replies, one from a countryman evidently not highly eduented and another from a persoa who by his chirography, English and evident delicacy I judged to be a gentlemnn. He signed himself Emory Perkins. He said he knew by the tenor of my advertisement that I was a lady, that he was looking for a wife, and snw no renson why he should not find one through the medlum of a newspaper than any other article he

Mr. Perkins and I fell into quite a correspondence. He did not seem to be in a hurry to meet me; saying that of finance and with but little change he was expecting every day to make a lot of money. It would be time enough to meet me when he could offer me a home. This looked a little as if he were one of those men with "Irons In the fire;" but he was too honorable to proceed with his suit until he could make me comfortable, so I did not drop him. Besides, his letters were delight-

This was in the third year c: the big war and congress had voted a large snm for avlation. All the inventors in the United States were trying to add some improvement to the air machine model which was to be copied in large numbers. One morning I read in a newspaper that someone had produced n substance very light and not inflammable, which was being tested as material for certain parts of the government airplane.

In a letter to him I inclosed the article and jocosely necused him of being the inventor referred to. He replied locosely, asking me how I had learned

At this time Charlie Owens came to see me very seidom. This plaued me. One day on meeting him on the street I asked him why he did not come to see me any oftener. He said that he was very busy. One of the frons he had in the fire was looming up. He was not sure but that he was about to make a fortune. If he did he would have plenty of time to spend with me. I laughed at him, calling him Johnny Look-in-the-Air. He retorted that it was better to look up than to loo! down and hurried on.

husband and about to make up my mind to advertise for a position in which I could nuke my living by my own exertions, when suddenly the situntion was completely nitered. I saw in n newspaper the announcement that the standard model for the nirplanes to be constructed for the government had been decided upon and contracts for hundreds of thousands had been

"Well," I remarked, "I dare say some minn's Iron in the fire has been turned into gold."

Scarcely had I spoken the words when there was a ring at the doorbell and the postman handed in the mull. One of the letters was from my matrimonial correspondent. I opened it and

"A matter of business which I have had on hand for some time—an fron in the fire," I muttered to myself-"has materialized, and in case, after meeting, we are suited with each other, I am in a position to offer you a home. I therefore beg that you will grant me an interview."

I caught my breath. Not that I was about to come face to face with a wooer I had never seen I drew back. All of a sudden it rushed upon me that was about to give up the only man loved. I hesitated, in case we should who was able to provide for me and Charlle Owens, who was always looking in the air for a fortune.

Common sense prevailed over love. mnde nu appointment for the next evening to receive my problematical

When the doorbell rang sharply at the appointed time, it sent a tremor through me; then a fooisiep in the hall, and Charile Owens stood in the doorwny. "Sweetheart," he said, "one of my

NATIONAL SYSTEM OF ROADS

Expert at National Capital Illustrates How Scheme Is to Be Brought to Successful End.

The establishment of a national syslem of highways is greatly facilitated by the federal aid road law, which compels all the states that would share la lts benefits-and that means all of the states-to equip themselves with state highway departments. With these state highway departments devoting their attention to the building of state systems of main, through-line highways, every condition is favorable for the next and crowning act—the estab-Mshment of a national system of high-

By way of ilinstrating how a national system of highways is about to be evolved by easy and logical stages, an expert at the national capital made the following statement:

"Gradually the state has made itself a compelling factor in the hundling of local road problems and, as a logical sequence, the federal government, first through educational activity and later by the financial aid provided by the federal ald law, has made Itself a powerful factor in the working out of the state highway problems. The next logical step follows the same course which has been pursued by the state governments, namely, the broadening of federal participation to provide for the establishment of a system of natlonal highways.

"This policy can be put into effect without disturbance of existing organizations, without providing new means in existing laws. The process would logically take a conrse somewhnt as follows:

"1. The state highway departments and the federal office of public roads would make an initial selection from existing state highway systems of those highways which are of interstate importance.

"2. A system thus selected would be approved by congress, with the requirement that federal funds be applied only to such system on and after a specified date.

"3. The federal ald should be extended to maintenance as well as construction, as the national system of highways should have for all time a close relationship with the federal gov-

"Some of the states already have mnde plans for utilizing the aid granted by the federal aid road act on roads which could not properly be included In a nntional system. But this need

Concrete Road in Mississippi.

not cause extreme conflict, as the federal funds for the first three or four years' operation of the present act could continue to be applied as now plnaned. The appropriations for the first two years are already available and considerable time necessary must elapse before the national system. could be laid out and made ready for the application of federal funds.

"Ia all probability the new scheme would come late effect as an extension of the present federal aid road act."

WHY FAMILY MOVED TO TOWN

Compelled to Make Change Because of Poor Schools and Bad Roads-Remedy for Poverty.

"Why don't they go on to a farm?" is the question with which many men dismiss from their minds the story of some poverty-stricken family. The chaaces are five to one that that same family was induced to move to town because of poor schools and poor roads in the country. The remedy for much not be aniagonistic, between this man of the poverty now in our towns is good roads and good schools in the country. Why should not country schools be given the same attention given city and town schools? Why should not the children be permitted to go to them over good roads with dry feet, instead of wading through mud and water? Good roads will make the country a better place in which to live.

A LECTURE Christian Science

Virgil O. Strickler, C. S. B.

of The Mother Church. The First Church of Christ, Scientist, In Boston, Mass.

Lecturer V. O. Strickler was heard at the Princess Theatre Sunday afternoon by a crowd greatly reduced by the extreme weather.

Mr. Strickler in his lecture said:

conditions, there is an ever-increasing inhere in the Mind of the Master. desire upon the part of the general this lecture to explain how Christian others through Christian Science.

Many Different Religious Beliefs.

It is said that there are more than two hundred different kinds of the Christian religion alone, not to menreligions that are not Christian. It is a fact that people do entertain widely instances the differences are irreconcilable, and yet every one believes with all the sincerity of which he is capable that his own particular beliefs are true. It must be conceded that, in the main, all people are equally honest and equally sincere in their why they are grouped together in heals. different forms of religion is because they honestly believe that through they will find the good which they so earnestly desire.

As one considers the subject of rejigion from this broad viewpoint it becomes entirely plain that most of the people in the world are believing as their religion many things that are to his explanations of spiritual truth,

live truth.

True religion consists of spiritual truth, and not of erroneous beliefs: hence it follows that one's religion is limited to the amount of spiritual han to obstruct spiritual growth.

erroneous religious beliefs by substices. tuting a knowledge of truth in place thereof, and to destroy out of the human mind all cvil qualities by planting good qualities in their stead. 1t wages relentiess warfare against all wrong mental qualities. It seeks to substitute love in place of hate, unselfishness in place of sclfishness, honesty in place of dishonesty, and truth in place of error. It lays trethought to the obedience of Christ,' (II. Cor. x, 5) as the Bible commands. It shows that the cause of all disease stroyed by the evangelization of the It teaches without any reservation and Christian Scientists everywhere tions and meet his human needs. are engaged daily in demonstrating and proving this to be true.

Every student of religion should begin to give heed to what the Bible the Discoverer and Founder of Christeaches concerning the importance of tian Science, and many people ask looking to the mental rather than to what it is that she has discovered. In the physical for deliverance from hu- reply it can be said that she has dis- the belief of life, Intelligence, sensaman discord. We read in Romans covered the law of Spirit which is tion, and substance in matter. If it viii, 6, 7, "To be carnally minded is spiritual truth. death, but to be spiritually minded is life and peace. Because the carnal in the Old and New Testaments, and that it has no sensation or intelligence, mind is enmity against God; for it is came to the inevitable conclusion that and is not substance, then it follows not subject to the law of God, neither, all of these events were correlated by that all material theories concerning indeed, can be." Again in Philippians means of an underlying spiritual law disease, and the method of solving all ii, 6, it is sald, "Let this mind be in that had been known and understood human problems, will have to be you, which was also in Christ Jesus;" by the men who wrought them, and changed from a material to a spiritand in Romans xii, 2, "Be ye transformed by the renewing of your law it would be found to operate in ly a thing of thought objectified,

These significant statements from times; that it would be a healing law objectification of diseased beliefs up

the Scriptures leave no room for and would now heat people of sickdoubt as to the cause of sin, diseaso, ness and sin and every evil human and death, or their cure. The carnal condition the same as then.

The command is to get rid of erronot a single sinful quality, nor any worry, fear, and other discordant tion in their place of qualities that

As this renewing process goes on, public to learn now these results are sickness, suffering, and discordant accomplished. It is the purpose of conditions begin to disappear, and wnen it is finished, and every mortal Science does those things. There is thought has been brought into subno mystery about Christian Science jection to Christ, then man will be healing, nor is it difficult to under- transformed from a sinning, sufferstand. It can be stated without any lng mortal into a state of peace and very serious considerations. reservation whatever that every per- harmony. The carnal mind with its son who is willing to do so may learn sin and superstition produces the how to heal sickness and to destroy conditions that lead to death, while to the desire to sin for himself and be spiritually minded, that is to have the Mind that was in Christ Jesus, "is life and peace." Christian Science teaches that this is the precise process by which human beings are saved from sickness and sin.

It will thus be seen that Christian Science healing in every case is spirittion the hundreds of other forms of ual, and results from the operation of tire universe, including every detail Truth or divine Principle in human consciousness, and not from the acdiffering religious beliefs. In many tion of one human mind upon another, nor from hypnotism, nor from mental suggestion.

To summarize the matter in a single sentence, it can be said that Christian Science · healing is accomplished through the activity of right thinking and right living, and in no other way religious beliefs. The only reason can one demonstrate the Principle that

Jesus healed the sick without drugs, and, what is more important to us, he their own particular form of religion taught other people how to do so, thus proving that his method of healing physical diseases by spiritual means could be taught to others, and understood and practiced by them.

As the disciples walked up and down the country with Jesus listening the desirability, but the necessity, of the lame, the deaf, the blind, whom exchanging false and erroneous be- he met by the wayside, they began to: liefs about religious matters for posi-junderstand for the first time that divine love is adequate to meet every human need, and that Jesus come to teach the way whereby every one might learn to prove it.

Moses and the prophets also healed to meet human needs, and the Old Christian Science aims to desrtoy Testament is filled with such instan-

It will thus be seen that the knowledge of spiritual truth, and the method of its application to deliver people from sickness, sin, and every kind of upon the earth at many times, and it is claimed for Christian Science that put away out of the human mind, the kinds of disease. it is the reappearance in our own generation of the understanding of the sin remains it will whip and punish that labor and are heavy laden, and I same spiritual law that was known mendous emphasis upon the necessity and understood in part by Moses and for "bringing into captivity every the prophets, and which was perfectly understood and demonstrated by Jesus, and by him taught to the disciples. There is no mystery about it. and sin is mental, and not physical, and the results produced by Christian and that both sickness and sin are de- Science are the results which have always followed and must necessarily human mentality with truth and love. follow, from the apprehension and demonstration of spiritual truth. Chriswhatever that the truth taught and tian Science is nothing more nor less (and does not even know that it expracticed by Jesus, when understood than a return to primitive Christianiand applied, is sufficient without any ty, and every one who turns to it drugs or any material means to heal fairly and honestly will find it that darkness which it never sees. When the sick and regenerate the sinner, which will satisfy his spiritual aspira.

Mrs. Eddy's Discovery.

Mrs. Eddy is acknowledged to be

Mrs. Eddy also studied the miracles she said that if she could discover the ual basis. If matter is 'itself omerethe same manner now as in Bible in whatever form, is also merely the

inventors Have Unlimited Opportunities to Think Out Death-Dealing Machines for Government.

The statement is often made that the war has developed no invention of military value. This, of course. is nonsense, says the Illustrated World. Trench periscopes, gas boml s, liquid fire apparatus, low visibility striping for warships, microphor. iletectors for use on submarines, seismographic detectors for hidden battery locations, synchronism for rapid fire guns and battle plane propellers, the perfection of the submarine itself, are all examples.

There are a thousand little invenions needed to help in ending the war-things you or I might invent, if we knew how.

For instance, a gun sight as efficient as the telescope and as easy to use as the open sight. A telescope that can see around a corner. A wireless field phone as efficient as a wired phone, a gas as deadly as chlorine and as invisible as air which can be cheaply and quickly pro-Hopkinsville camp, 11533, Modern dinary hearing a means for detect- parents, Mr and Mrs. Cyrus Marsh, at project heat as efficiently as present Pembroke Jaurual. ones do light-imagine what such a device would mean in protection from aerial raids. Imagine a searchlight beam two miles up in the air hot enough to set fire to anything

On such problems as these inventors may work with the full knowledge that if they really discover something worth while they will do an incalculable good to humanity and, incidentally, feather their own nests to the limit of their desires.

HAYDON PRODUDE CO.

A Scheme That Failed

LY ELINOR MARSH

(Copyright, 1917, Western Newspaper Union.)

Ben and Jim Coverdale were twin brothers and thought of an old and very respectable family, were poor.

An uncle in South America died and left them n coffee plantation. The hequest was made with the provision that they live on the property and develop it. It was not worth much, but might be mode valuable.

Ben was disposed to try a business scheme at home and forfel'ed his share of the inheritance by remaining where was. Jim took up the property in South America.

Ben lived with a widered sister, who soon after died, leaving her brother a little four-year-old gar'.

At the age of fifteen the girl, Adele Weatherby, hecame her anele's housekeeper. There was a sincere affection between uncle and niece, the relation between them heing more like that between father and daughter.

When Adele was seventeen years old her nucle paid some attention to Miss Mildred Conyngham, a young lady of the fashlonnble set.

When Mr. Coverdale was about fifty years old he fell Ill. Miss Conyngham visited him frequently and sent dellcacles. He was devotedly nursed by Adele for months, when unfortunately she also fell Ill. It was then that Miss Conyngham betook herself, bag and baggage to the Coverdale home to eare for the invalids, not waiting for make satisfactory growth. an invitation or even their permission.

Both invalids were lil a long while and Miss Conyugham was nnremitting In her attentions to them.

Meanwhile Jim Coverdale in Sonth America had prospered.

The only knowledge of Jim Cover dele's growing wealth that ever preached his native town came in this wise: A man who had heen to South America met Miss Conyngham and she asked him if he had ever seen or heard anything of a Jim Coverdale living in Brazil?

"Yes," was the reply, "I have been on his plantations."

"His plantations?" "Yes, I suppose he has a dozen of them. Jim Coverdale is an enormously

At this point of the story several important matters connected with it eccurred very near together. Jim Coverdate sold out his property in Bramil and left for his former home in the United States. Before his departure he made a will leaving all he possessed to his brother. This will he sent, by a different steamer from the one on which he salled, to his brother's lawyer. John Williams, with Instructions to say nothing about it. The ship on which Jim Coverdale sailed was lost in a storm and all on board went down with her.

Ben Coverdale dled a month after the arrival of the will, but he never new of his inheritance. Then came When Ben Coverdale's will was opened it was found that his small

property was left to Adele. When Miss Conyngham heard of the death of Jim Coverdale she felt certain he had left his property to his ther Ben. Hearing of Jim Cover dale's death, Mr. Williams opened the will and announced to Adele that she

was the owner of a princely fortune. Then came Miss Conyngham with n statement that Ben Coverdale had told her that in a codicil to his will he had Try this plan: Turn the sheep out in

left her a third of his property. The fact was, Miss Conyngham knowing that Jim Coverdale was rich, that he was dead and had doubtless left his property to his brother, tried to induce Ben Coverdale to marry her. Pailing in that she used all her energles to induce him to leave her n portion of itis possessions. Coverdale, finally yielded and sent for his so-Veltor.

When the will was admitted to probate it was evident that something had been torn from it. This soon became a matter of general knowledge and immediately the friends of Adele Weatherby and those of Miss Conyngham were pitted against each other.

Up to this time the contents of James Coverdale's will were unknown to anyone but Adele and the attorney, who had it in his keeping.

For a time neither admitted nor dealed that any codicil was attached to the will. Later the attorney acknowledged that there had been a codicil and that it had heen torn off, but this admission was made only to Miss Conyngham. She was assured that she would not be benefited by its production and she was advised not to compel him to

This was the end of the matter till the case came into court and Mr. Williams was called upon to state if the will had been mutliated. He produced the will and a fragment, which he show I had been torn from it by the jugged edges of each paper which fitted into the other. Then he proceeded tends to prevent the sow from become

to read the fragment: "To be left attached to this will only in case Mildred Conyngham attempts to cialm any of my property. She took sdvantage of my illness and that of my ulece to come into this house uubidden and tried to dominate both of us. She has attempted to force me to marry her. This falling she endeavored to induce me to leave her a part of what I possess. What her object has been in this I cannot conceive, for

COLD RAINS INJURE HORSES

Exposure of Young Animals to Severe Weather Causes Shrinkage and Retards Development.

The exposure of young horses to the short spells of severe weather which occur frequently during the fall, causes a shrinkage in live weight and is a hindranee to rapid economical development. Older horses seem to stand this sort of treatment with less loss. It is doubtless true that animals become accustomed to winter weather. but frequent changes from fine fall weather to had storms retard gains in colts without shelter.

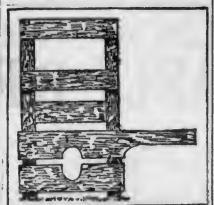

Four yearing Percheron filles with an average weight of 1,169 pounds on pasture, with a ration of six pounds of corn and oats (one-half of each by weight) dally shrunk an average of 32 pounds each during the spell of severe weather on October 18 to 20 at the University of Missouri. Aged mares in foal, lost only slightly during the same

period. inexpensive sheds which will protect colts from wlud, rain, sieet and snow will prevent part of such loss in weight. Growing horses should not be housed too closely and prevented from taking plenty of exercise, but they should not he subjected to extremely bad wenther if they are expected to

SHORT PASTURES FOR SHEEP

Brushy Field on Almost Every Farm. Where Animais Can Be Made to Return Good Profit.

Sheep keeping should be encouraged. No other animal can thrive on such short pasturage as the sheep. Sheep mannr is the most valuable of all. On almost every farm there is a brushy field on which sheep could browse eight months of the year.

BIG AREAS ARE REFORESTED

Scheme Carried Out Successfully in France impracticable in Mississippi Vailey, Say Engineers.

In connection with flood-control gitation, more or less attention is being drawn to the subject of reforestation, says Popular Mechanics Magazine. While this plant according to some engineers, is manifestly impracticable so far as its application to large streams like the Mississippi or Missouri rivers is concerned, in some cases it undoubtedly does have a certain value.

In the mountain regions of France and Germany the scheme has been No. 52-St. Louis Express 10:20 a m. employed, and an interesting ex- No. 94-Dixle Flyer 7:05 p. m. ample is afforded near the headwaters of the Ubaye river in the lower Alps. The work was commenced in No. 90-Ev. and G. accom. 3:26 p. m. 1887 when the mountainsides were entirely bare. Masonry barrages were constructed at frequently intervals to catch silt and check serious erosion. The mountains were then retimbered. Today, instead of being a bleak, barren waste as in former times, this district is covered with

Since the land in this instance has little agricultural value, the chief objection to reforestation cannot be raised. In all, according to the latest figures obtainable, France has retimbered 629,488 acres.

But to reduce the height of flood waters at Memphis, merely from the stage reached in 1912 to that of the next highest record, the reforestation of 566,000 square miles of the upper valley's most fertile land would be required, according to the president of the Mississippi river commission.

HOME-GROWN SEED IS THE SUREST! AND BEST

SELECT SEED CORN

ENOUGH FOR TWO YEARS

For 1918 Plantings and to Insure Adapted Seed for 1919 START RIGHT --- NOW!

WHERE?

In the field from standing stalks of a variety that has "made good" and [become locally adapted.

HOW?

Pick best ears from plants showing best yields in fair competition with neighboring plants. Storm-proof plants with hanging ears give best seed. Long ears with large, uniform kernels are the best. Avoid sappy ears heavy with

WHEN?

As soon as ears are ripe and hard--before heavy frosts or autumn rains injure the kernels for seed. The day the ears are selected they should be hung where they will become thoroughly dry in a few days.

WHY?

It pays. Field selection of seed corn is one of the surest and best paying operations on the farm. Proper care of seed corn pays well. Tests show that properly cared for seed corn has yielded eighteen bushels more per acre than crib-stored seed from the same field.

Insure a Right Start for Your Next Two Corn Crops by Saving Ample Seed Now

test in the Scriptures of Immanity: . He who desires to amin other people will avoid referring to the voices of men and will take care only sparingly to apeak of human impotence, while he will talk largely of human virtue or power and of the way by which it may be made perfect, so that men being moved, not by fear or aversion but by the effect of joy, may endeavor as much as they can to live under the rule of reason.

Argumentative Woman.

The argumentative woman is a sobeen forced to enter the great world, as it is possible for a body to be. Arprocess one absolute necessity for the world's intellectual development, every so often. Plain common sense should tell us the reason why.-New York Evening Telegram.

Children in Japan. Japan prizes her children as her greatest asset. She seeks to instill the beauty and the joy of life into their regular subscription price is \$1.00 souls. She nims to develop their bodies per year, and this pays for 156 papers, and their minds to the rhythm of happiness and not under the rod of a rigid discipline.-Exchange.

> Male Wasps Not Hardy. There isn't a male wasp in existence when winter ends. Late the preceding fall the wasps mate. The coming cold weather kills every worker and male, while Mrs. Wasp hies herself to a convenient place and hibernates, ready to come forth in the spring and lay eggs to replenish the race.

Something Not For Sale.

During the opening of the Kolb & Howe jewelry store this week a lady who entered was met by one of the young lady assistants who smilingly said:
"Madam, can I show you some-

thing?"
"No, I guess not," was the reply,

"I want to see Mr. Kolb." "Oh, I can show you Mr. Kolb," was the quick rejoinder, "but he is not for sale."

Well Answered.

Old Lestorich, an uncomplimentary husband, who used to appear in the Austrian paper Floh, said to his wife: "If nature had made me an ostrich, perhaps I could eat your cooking." "That would be fine," answered his imperturbable wife. "Then I could get some plumes for my hat."-Christian

Childish Imagination.

The joy that the real fairles and cives and little people give to children, the delight they can find in Imagining a world where anything is possible, where there are no boundaries of facts, where all is beautiful and always surprising, is hard to gauge because we are so remote from it. But it is very law from a law school or university real to them and is a starting point for other more wonderful and more instructive tales, because it is so easy to grasp and it has such an unadulterated appeal to the imagination of a very young child.—Exchange.

Still Allowed to Breathc.

ink Spots in Books.

Anyone who has been unfortunate enough to get lnk on a favorite book, or, worse still, a borrowed one, may be interested to know how one housekeeper removed such disfiguring marks. She bought a little oxalic acid, diluted it with cold water and painted it over the lnk spots with a fine camel'a hair brush. Then she applied a sheet of biotting paper to the stained part, and absorbed the stain with the liquid.

the one who is a born leader, who is the first in so many things, but there is no greater honor than to be the first to end a misunderstanding, the first to sny, "I'm sorry,"-Exchange.

The individual.

The initiation of all wise or noble things comes, and must niwnys come, from individuals—generally at first from some one individual. The honor and glory of the average man is that he is capable of following that initintion; that he can respond internally to wise and noble things.-John Stuart

Who invented ice Cream? While It has been confidently as serted for many years that "Dolly" Madison, wife of the president of the United States, invented lee cream, the truth of the matter is that this delicacy was introduced to the English aristocracy of the eighteenth century by a London confectioner named Gunther, who may or may not have been its inventor.

Meaning of "Purim." The word "pnrim," the name of the great annual fessival of the Jews. means "lots," This feast commemorates the preservation of the Jews in Persia from the massacre with which they were threatened by Haman (Esther 9). They gave the name purim or "lots" to commemorate the festival because he had thrown lots t ascertain what day would be auspicious to the

Shaping One's Own Destiny. We all shape our own destiny. There ia no use in blaming our parents, or the life around us, for what we are. On the other hand, we should keep in mind the well-worn adage, "Any dead fish will float down stream, but it take a live one to swim against the current. Every one of us can improve onrselves mentally and thus fit ourselves for better work if we but make an honest effort to do so. Competition is pretty keen these days, bence the indoient and the "I wish I were" type stand absolutely no chance for a hearing.—Exchange.

A Good-Hearted Man

By ALAN HINSDALE

My brother Jim and I inherited enough money from father to go into business and we set up a hardware store. Not having any eustom to start Many a quarrel would come to a on I went out beating up trade, leavspeedy ending if both sides were not ing Jim in the store to do the inside nfraid of being the first to make ad- work. I was a pretty good salesman, vances. Instead of being unwilling to if I say it myself, but Jim made a noon. take the first step, you should be glad iness of his part of the business. He of the chance. Some of you perhaps, did not keep at the financial part of are a little inclined to be envious of it at all. He would trust any one, and the consequence was that we were scon fonded down with bad debts.

One evening nfter business hours we figured up and found that 'we couldn't go on. Jim had advanced money to certain parties who had played upon his feelings. He agreed to go out of the concern, assuming those dehts and leave me to try to wind up the concern. He took hlmself off to a neighboring town and I went to work trying to get in the bad debts he had made.

There were so many of them, lirge and small, that it would take me a lifetime to run them all down. So I hired a collector. I paid him a hundred doiiars a month and at the end of the first month he turned in \$75. This was not paying, so I dismissed him and hired another collector. He made a worse failure than the other man. I hired five men in specession, then switched off and a woman having applied for the position I engaged her.

Since Miss Julia Sparks had a winsome way with her I believed she would succeed where others had falled. And she did. The first month she worked for me she got in \$960, the second month \$1,600 and the third \$2,-300. She continued her work till she had got in every ontstanding debt.

Jim's assuming the loans he had made didn't help me at ail. He could neither collect them nor pay them himself. I was sued as his partner on one of them and the case went against So I was llable for them all.

"I wonder," said Miss Sparks one day, "If I couldn't collect those debts for your brother, so as to enable him to pny them to you."

"If you can and will," I replied, "I will grant you any favor you ask." "Well, I'll try," she said. "Can you give me a list of them?"

I gave her the list and she started out to see what she could do. She found it very hard work. The debtors were mostly "dead-beats," who had imposed on Jim's good nature, and some of them had no money to pay with. Those who had the money were skinflints, who never paid until they were compelled to at the end of a law-

Miss Sparks started out on her work. The first day she succeeded in getting three dollars that Jlm had loaned n young sport who got rid of it the same day at pool. I think he must have gone sweet on the collector, or he never would have paid the lonn in the world. Miss Sparks averred that he had won some money at poker the night before and she caught him in the nick of time. Three days later she get in two amounts totaling eight dollars. The amounts she collected were sometimes paid to her, but these were small ones. All the large ones were paid to Jim.

At the end of three months' hard work Miss Sparks told me that she bid got in 50 per cent of the amount, 25 per cent having been paid directly to Jim. The remaining 25 per cent was uncollectable, either because the debtors were without any means whatever or could not be found. The amount Miss Sparks had collectedsixteen hundred dollars-she turned into me. She asked me, should Jim turn in the amounts pald to him would I, upon his promise to turn a deaf ear to applicants for loans and sell only good buyers, take him back into the firm. After refusing for some time I at last gave in. I was puzzled to understand why she was interested in

Jim's reinstatement. She came into the store the next afternoon with a pair of red eyes, showing that she had been weeping. When asked her what was the trouble she told me that she had gone to Jim for the amounts paid hlm and found that he had lonned or given away every cent that had been paid him.

Her Interest In Jim and her connection with this matter remained to be elenred up. She and Jlm were old acquaintances. He had loaned her money, so that she was one of the debtors. She had fallen in love with him, and knowing of his difficulties resolved to get him out of them. She had collected all the slow debts he had made for the firm, and then had to get to work on the amounta he had loaned. She was much crestfallen at the re-

"If you hadn't got stuck on Jim," I said, "I would ask yon to marry me. You've not married Jim, have you?" "Yes, I have," was the reply.

"Well, you and Jim comain here, Jim can be salesman under you, you to de-elde whom to trust. I'll be outside man. How does that ault you?"

She threw her arms about my neck and cried some more. The firm was reorganized and turned out a great
